

About

Mineral Surfaces are an eco-friendly, sustainable engineered stone using environmentally friendly materials. These surfaces emulate the look of natural stone using high-definition imaging that penetrate the surface producing amazing color, veining and texture with a natural appearance. With an impressive visual depth, the result is a high-end material offering timeless elegance.

Mineral Surfaces Benefits

SCRATCH RESISTANT

Won't scratch under normal everyday use.

BACTERIA RESISTANT

Non-porous so it does not harbor bacteria.

STAIN RESISTANT

Non-porous so stains are unlikely to penetrate the surface.

HEAT RESISTANT

Withstands moderate temperatures.

COLOR/PATTERN CONSISTENCY

Perfect for when more than one slab is needed.

Finish

POLISHED

Also known as Hi-Gloss and is a finish with a high shine.

Corners

Per Mineral Surfaces manufacturer guidelines, a minimum allowed inside sink and L-shaped corner can be no less than 3/8" radius.

Seams

Seams will be filled with a color-matching adhesive that is visible and will be felt. Seams are more apparent on materials with texture and movement. All desired seam locations will be considered, but final placement is up to the discretion of the fabricator. Seam placements are determined based on slab/sheet size, layout, inherent material characteristics, installation requirements and safety.

Support

The maximum unsupported overhang for a 3CM Mineral Surfaces product is 14" and 11" for a 2CM product as long as 2/3 of the countertop is supported by a solid affixed structure (e.g. cabinets, walls, etc.). Additional support or brackets are required in other situations for safety concerns. Bracket supports should be placed 6" from each end, spaced up to 30" apart and extend to 3" - 6" from the edge.

Please refer to each manufacturer's website for more information.

Workmanship Warranty

All interior residential projects come with a lifetime guarantee on seam separation, voids in the seam adhesive and sink separation from integrated or undermount cutouts.

Care

Mineral Surfaces are a man-made, maintenance-free surface. These countertop surfaces do not need to be sealed or resealed. Mineral Surfaces will retain its gloss and smooth surface due to its non-porous properties.

Clean surfaces with a soft cloth using a mild liquid soap and warm water to remove most residues. For routine cleaning, use a neutral pH cleaner such as MORE™ Stone & Quartz Cleaner + Protector with a soft cloth to keep your countertop beautiful, spot free and shiny. Avoid cleaners containing bleach, acetone or contain abrasive particles.

Use hot pads and trivets with heat generating appliances, as well as cutting boards, place mats and coasters to protect your seams and surface.

WE'RE READY TO BRING YOUR VISION TO LIFE!
